**RE:** 1:29 scale Gunderson 50' Hi-Cube Plug Door Boxcar

AML American Mainline is proud to announce upcoming production of 1:29 scale, 45mm gauge, Gunderson 50-foot hi-cube boxcars. Built to AAR Plate F clearances, these 6269 cu. ft. boxcars feature a 13-foot inside height which allows easy forklift access for loading large paper rolls or other bulky lading.

AML's new 1:29 scale boxcar will satisfy modelers desiring contemporary rolling stock to operate behind their modern diesel locomotives. Features include:

- Finely detailed plastic body
- Sprung die-cast trucks with metal wheels
- Detailed underbody
- 14 different road names in 1st run, also available Undecorated
- Decorated cars available with four different road numbers
- 3 coupler mounting options included: body mount, truck mount, or loop truck mount

Gunderson of Portland, Oregon constructed small groups of hi-cube single and double door boxcars in 1988 and 1989 for Burlington Northern and Montana Rail Link. Additional railroads and private owners also purchased these types of cars. AML's model is based on single door boxcars built by Gunderson between 1994-2000. We will also offer colorful paint schemes applied to similar looking cars built by Trenton Works Ltd. of Trenton, Nova Scotia, Canada.
